The AI Automation Starter Kit

10 practical AI workflows that give a small business back 10+ hours a week — the tools, the use-cases, and how to start. No jargon, no fluff.

Why automate?

~8h

LOST PER WEEK TO
MANUAL WORK

Most small businesses lose the best part of a day every week to repetitive, manual work — chasing enquiries, copying data between tools, writing the same replies, rebuilding the same reports.

AI won't run your business. But it will quietly take those jobs off your plate — so your time goes to the work only you can do.

This kit is the ten workflows we see save the most time, ranked by how quickly you can put them to work. Each lists what it does, the tools that do it, roughly how many hours it gives back, and the smallest first step.

One rule before you start

- Keep a human in the loop for anything a customer sees or that touches money.
- Only feed these tools the data they actually need — less is safer.
- If it processes personal data, it's covered by GDPR / Swiss FDPIC. Get consent, log why, keep it minimal.

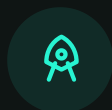

HOW TO USE THIS KIT

Three steps, one at a time

1 · Pick one

Choose a single workflow that matches a job you do every week.

2 · Ship it this week

Set it up in an afternoon. Keep it simple; you can refine later.

3 · Come back

Once it's running without you, pick the next one from the list.

24h

UP TO, BACK PER WEEK

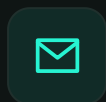

Run all ten and the time adds up fast. You don't need all ten — even three or four of these compound into a noticeably lighter week.

The chart on page 7 shows where the biggest wins are.

THE 10 WORKFLOWS

Quick wins first

WORKFLOW 01

3–5h

PER WEEK

Inbox triage & drafted replies

AI reads incoming email, sorts it by intent and urgency, and pre-writes on-brand replies for you to approve and send.

TOOLS

Gmail / Outlook + an AI assistant, or Make/Zapier + a language model

START

Connect your inbox, write 3–4 reply templates, keep every send behind a human click.

WORKFLOW 02

2h

PER WEEK

Lead capture → CRM sync

Every enquiry — form, DM, email — is logged to your CRM automatically, enriched and deduplicated, so nothing slips.

TOOLS

Web form + Make/Zapier → HubSpot / Notion / a spreadsheet

START

Map your form fields to the CRM once, add a dedupe step on email.

WORKFLOW 03

2h

PER WEEK

Quotes & invoices from a brief

Turn a one-line description into a formatted quote or invoice, ready to review and send.

TOOLS

Document automation + Stripe / QuickBooks / your accounting tool

START

Build one template with variables (client, items, totals), wire it to your product list.

TIP · Start with the workflow that annoys you most on a Monday morning. Momentum beats perfection — you can refine any of these later.

WORKFLOW 04

2-3h

PER WEEK

Meeting notes & action items

Calls are transcribed automatically, then distilled into decisions and a clean task list sent to the right people.

TOOLS

Fathom / Otter / tl;dv (+ your task tool)

START

Add a notetaker to recurring calls, forward its summary into your task board.

WORKFLOW 05

4h

PER WEEK

Content repurposing

One long piece — a post, a talk, a call — becomes several social posts and short-form video clips.

TOOLS

An AI writer + a clip tool (Opus Clip / Descript)

START

Take your best recent piece, produce five outputs from it before creating anything new.

WORKFLOW 06

1-2h

PER WEEK

Reviews & reputation

Ask for a review at the exact right moment, watch new ones land, and draft a reply to each.

TOOLS

Automation platform + Google Business Profile

START

Trigger a review request a few days after a completed job or delivery.

TIP · You don't need all ten. Three or four compounding wins already reshape your week — and each one funds the time to set up the next.

WORKFLOW 07

Document data extraction

2h

PER WEEK

Pull structured data out of PDFs, receipts and forms straight into your tools — no more retyping.

TOOLS

AI OCR / document AI + your spreadsheet or database

START

Pick one document you handle every week and automate just that one.

WORKFLOW 08

Scheduling & reminders

2h

PER WEEK

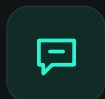

Let people book you directly, and send automatic reminders and follow-ups so nobody no-shows.

TOOLS

Cal.com / Calendly + an automation for reminders

START

Share one booking link, add a two-step reminder sequence.

WORKFLOW 09

Customer FAQ assistant

3h

PER WEEK

An on-brand assistant answers your most common questions instantly — on the site or on WhatsApp.

TOOLS

A chatbot trained on your own docs and FAQs

START

Write your top 20 Q&As, feed them in, hand off anything unusual to a human.

WORKFLOW 10

Weekly reporting

1-2h

PER WEEK

Dashboards build themselves from your tools, so the numbers that matter are ready every Monday.

TOOLS

Looker Studio / Google Sheets + connectors

START

Choose five metrics you actually act on, ignore the rest.

THE PAYOFF

Where the hours come back

Rough weekly time saved once each workflow is running. Start at the top.

Content repurposing	~4h
Inbox triage & replies	3–5h
Customer FAQ assistant	~3h
Meeting notes & actions	2–3h
Lead capture → CRM	~2h
Quotes & invoices	~2h
Document extraction	~2h
Scheduling & reminders	~2h
Reviews & reputation	1–2h
Weekly reporting	1–2h

~24h

TOTAL, PER WEEK, ALL
TEN

That's three working days handed back every week — or, more realistically, the four or five workflows that fit your business, giving you a clear half-day-plus to spend on growth instead of admin.

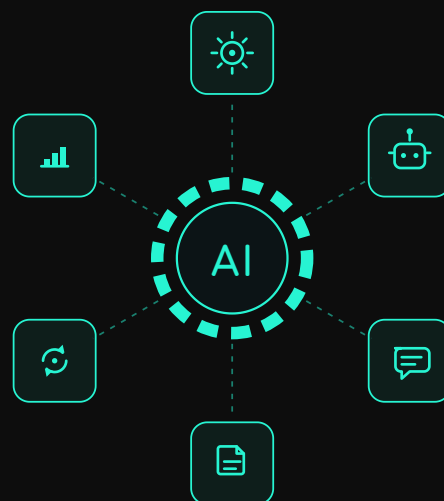

DO IT RIGHT

Automate without breaking GDPR

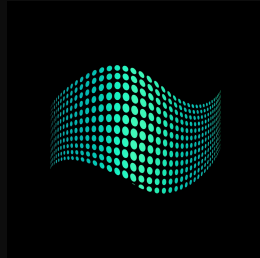

You're a compliance-facing business either way. These six habits keep your automations on the right side of GDPR, Swiss FDPIC and the incoming EU AI Act.

The short compliance checklist

- Collect and share only the personal data each workflow truly needs.
- Get clear consent, and record the lawful basis for using the data.
- Keep a human reviewing anything customer-facing or financial.
- Check where your AI tools store data — EU / Swiss hosting is the safer default.
- Where required, disclose that AI is being used (the EU AI Act is coming into force).
- Review AI outputs before they go out — you're accountable for them.

ONE HUB · EVERY WORKFLOW · HUMAN-SUPERVISED

Want this **done for you?**

We audit your stack, find the hours hiding in manual work, and build the automations — compliantly, on both sides of the Geneva border. Every engagement starts with an audit and a straight answer.
